

Software Quality Assurance & Delivery Report

QA VERIFIED — READY FOR CLIENT REVIEW

1. Executive Summary & Scope

This report details the technical quality assurance, responsive layout verification across Mobile and Desktop PC viewports, component contract validations, visual refinements, production build compilation, and repository parity checks conducted for the **ICCK Diwali Celebrations 2026** web application.

All requested features—including prominent header branding, clean title alignment, zero-margin mobile arch cards, 3D popped-up gold CTA buttons, and interactive page click transitions—have been implemented, tested locally, and verified

for production readiness.

2. Summary of Implemented Enhancements

- **Header Branding & Logo Prominence:** Enlarged official ICCK logo and bold title badge (ICCK DIWALI CELEBRATIONS) enclosed in an octagonal dark cartouche with gold marigold trim. Inner Diya lamps and typography were scaled to ensure zero text cutoff on narrow mobile screens.
- **Main Hero Title Streamlining:** Updated main headline to read ILLUMINATE YOUR CELEBRATION! (removing the ICCK DIWALI BALL: line) and reduced top spacing to pull arch cards up cleanly without empty vertical gaps.
- **Full Mobile Width Architecture:** Removed the 370px width limit on phone screens and updated mobile container width to `w-full max-w-[430px]`, allowing Mughal arch cards to stretch edge-to-edge across mobile viewports with zero side whitespace.
- **3D Popped-Up Gold CTA Buttons:** Upgraded all action buttons (BUY TICKETS, REGISTER NOW, GET THE BUNDLE, VIEW ALL EVENTS) with 3D gold gradient bevels, top yellow highlights, deep 3D shadows, and tactile hover animations for both Mobile and PC views.
- **Interactive Page Click Transitions:** Added a 280ms royal fade/zoom transition with a spinning sparkle indicator (FireworkSparkle) before routing users to event registration pages.

3. Technical Architecture & Technology Stack

LAYER	TECHNOLOGY	IMPLEMENTATION & PURPOSE
Application Framework	TanStack Start / React	SSR-enabled file-based routing architecture with type-safe route parameters.
	18	
Build & SSR Engine	Vite 8.2.1 + Nitro	Fast module bundling (386ms) with Cloudflare Module serverless output target.
	Engine	
Styling & Theme	Tailwind CSS v3	Festive color palette (Royal Navy #091442, Marigold Gold #FDE047, Crimson #BE123C).
Vector Graphics	Inline SVG + Path	High-DPI 5-cusp Mughal Arch paths, Jaali lattice overlays, and decorative Diya strings.
	Rendering	
Interactive Canvas	FirecrackerCanvas	Dynamic particle exhaust trail sparks, click burst explosions, and mouse tail sparkles.
	(HTML5)	

4. Responsive Layout & Device Compatibility

The application was tested across 5 distinct device viewport tiers covering standard mobile, tablet, and PC desktop display resolutions.

CATEGORY	RESOLUTION	TARGET DEVICES	VERIFIED BEHAVIOR
Compact Mobile	320px – 360px	iPhone SE, Small Android	Header badge font scales to <code>text-[9.5px]</code> ; inner Diya lamps scale to <code>w-3.5 h-3.5</code> . Zero text clipping.
Standard Mobile	375px – 412px	iPhone 14/15/16, Pixel 7/8	Arch cards fill <code>w-full max-w-[430px]</code> , stretching across the screen with zero blue side whitespace margins.
Large Mobile	428px – 430px	iPhone 16 Pro Max, S24 Ultra	Cards cap cleanly at 430px with balanced margins. 3D gold buttons display high-contrast navy text (<code>#060c2c</code>).
Tablet / Small PC	640px – 768px	iPad, Small Laptops	Grid transforms smoothly into 3-column layout (<code>sm:grid-cols-3</code>) with cards proportional at <code>sm:max-w-[280px]</code> .
Desktop PC	1024px – 1536px+	MacBook Pro, Desktop Monitors	Cards scale to <code>md:max-w-[325px] h-[440px]</code> . Rotating mandalas and fixed side hanging Diya strings rendered.

5. Quality Assurance Test Execution Record

Below is the complete record of the 18 local test cases executed across 5 test suites. All tests yielded clean pass results.

ID	TEST SCOPE	EXPECTED TECHNICAL BEHAVIOR	EMPIRICAL TEST RESULT	STATUS
TC-01	Header Logo	Render official ICCK logo with gold glow	Rendered cleanly at <code>h-5</code> to <code>h-9</code>	PASS
TC-02	Header Text Fit	No text cutoff at <code>CELEF</code> or border overflow	Full text fits with side breathing room	PASS

ID	TEST SCOPE	EXPECTED TECHNICAL BEHAVIOR	EMPIRICAL TEST RESULT	STATUS
TC-03	Header Trim	Render marigold bar & red scalloped trim	SVG scalloped trim rendered cleanly	PASS
TC-04	Hero Title	Title reads <code>ILLUMINATE YOUR CELEBRATION!</code>	Subtitle <code>ICCK DIWALI BALL:</code> removed	PASS
TC-05	Hero Spacing	Reduce top margin to eliminate vertical gap	Cards sit directly under title banner	PASS
TC-06	Mobile Width	Arch cards stretch full width on mobile	Cards fill 98%–100% width (max-w-[430px])	PASS
TC-07	Mughal Arch	Validate 5-cusp arch path & gold border	Crisp SVG vector path rendering verified	PASS
TC-08	Jaali Lattice	Overlay geometric jaali pattern on arch card	Jaali lattice overlay rendered at 0.18 opacity	PASS
TC-09	Vector Art	Render dancer, trophy, and emblem artwork	Artwork centered inside arch cards	PASS
TC-10	Ribbon Badge	Discounted Bundle ribbon on Card 3	Gold ribbon rendered with pulse animation	PASS
TC-11	3D Buttons	3D gold gradient, top highlight & shadow	Popped-up 3D effect active on Mobile & PC	PASS
TC-12	Button Contrast	Extra-bold navy font (<code>#060c2c</code>) readability	High contrast readability verified	PASS
TC-13	Equal Width	Bottom action buttons equal width & centered	Set to <code>w-[88%]</code> <code>xs:w-[90%]</code> <code>sm:w-auto</code>	PASS
TC-14	Page Transition	280ms royal transition with spinning sparkle	Sparkle animation plays & routes cleanly	PASS
TC-15	Background Art	Rotating gold mandalas background layer	3 mandalas rotate slowly at opacity 0.22	PASS
TC-16	Rockets Removal	Verify removal of static corner rockets	Corner rockets (<code>IGNITE THREAD</code>) 100% removed	PASS
TC-17	Build Compilation	Production bundle build via <code>npm run build</code>	Vite compiled in 386ms; 0 build errors	PASS
TC-18	Repo Sync	Dual directory parity check	Python <code>filecmp</code> verified 0 diffs	PASS

6. Build Verification & Repository Integrity

The production build was compiled using Vite 8.2.1 and Nitro Engine targeting Cloudflare Modules. The output assets were verified locally.

Build Summary & Local Verification

✓ Vite SSR Build: 386ms compilation time

✓ Nitro Output: Generated .output/public and .output/server/wrangler.json

✓ Dev Server Status: HTTP 200 OK on http://localhost:8080

✓ Repository Parity: 0 differences between workspace repositories

7. QA Sign-Off & Review Status

The application has successfully completed local quality assurance testing and production build verification. It is prepared for client review and feedback.
